OVERFIT

Dropout

Ciclo de diseño

Division de la dataset

Entrenamiento: aprende el modelo

Validación: para ver cuál de las variantes del modelo es mejor

<u>Test</u>: para evaluar el mejor modelo

Division de la dataset

Ejemplo:

Entrenamiento: fotos de gatos de websites (ejm. fácil recolectar)

Validación: fotos de gatos de cam celular (asegurarse que pertenezcan Test: fotos de gatos de cam celular a la misma fuente)

<u>Test</u>: para evaluar el mejor modelo --> (no tener una test set es OK) (se considera val set = test set)

Division de la dataset

Antes

(machine learning) 70% train, 30% test

1000-10000 examples 60% train, 20% val, 20% test

Despues

(deep learning) 98% train, 1% val, 1% test

~1'000'000 examples 980'000 10'000 10'000

Data para entrenamiento

LeNet

AlexNet

VGG-16

ResNet
